Post-Peel PLUS Ampoules

Post-Peel PLUS Ampoules

After the biochemical peeling you will notice a slight reddening of the skin, you could feel the tissue get dry or tight and see how the area begins to flake 2 days after the treatment. These symptoms are a normal consequence of all deep exfoliation; they disappear over time and do not represent any alarm sign. In general, this phase lasts 3 to 4 days, then the skin begins its natural regeneration process and you will notice your skin more luminous, hydrated, firm and with smaller pores.

Once the biochemical peeling has been carried out, it is necessary to take care of the skin, since it is more sensitive and exposed than ever. Therefore, you must protect it to avoid irritation and the formation of spots due to sun exposure.

Post-Peel Plus Ampoules are designed to act directly on the treated area once the biochemical peeling to which the skin has been exposed has finished. In this way we ensure that the entire treated area recovers its natural pH, maintaining the lipid layer of the dermis and favouring its recovery of a balanced composition and enhancing the dermal regeneration process that occurs after a biochemical peel.

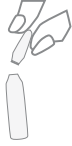

Once the peeling is finished, it is important to stimulate the cells so that they begin the cell regeneration process that gives rise to younger looking skin.

Regeneration
Effect

Liposomal Growth Factors
Centella Asiatica Extract
Liquorice Extract
Rosemary Extract

How to use

Carefully break the ampoule around its neck with a simple gesture and use the entire content. **Each ampoule contains an intensive treatment for the whole facial oval.**

Apply and perform a circular massage until it has been fully absorbed.

Avoid the eye contour and mucous membranes.
