Biochemical Peels

Where science meets ecology

LARIMEDICAL is a line of bio-based scientific natural cosmetics, an avant-garde line formulated with the maximum percentage of ingredients of natural origin, 100 % safe and effective.

Through a holistic approach, LARIMEDICAL incorporates active ingredients in its formulas with an effectiveness that has been proven by dermatological science, resulting in high-performance products with low environmental impact.

Based on biochemical peels of natural origin, LARIMEDICAL is designed to address various skin problems by acting biochemically on the epidermis in a safe and effective way. Controlled and effective desquamation of the most superficial layers of the stratum corneum lead to transformative results that show a totally renewed and healthy skin.

In accordance with our ethics of transparency and commitment to sustainability, all LARIMEDICAL products show detailed information of the percentage (%) of natural ingredients used, as well as the additional ingredients necessary to guarantee the stability and safety of the formula.

With an absolute commitment against animal cruelty, all LARIMEDICAL products are VEGAN and have not been tested on animals.
